

Cognitive Brain Health Report

Integrated TCM Functional Index

Core Indices

1. Dampness Index (1–10)

Clinical Interpretation

The Dampness Index reflects the likelihood of functional metabolic and inflammatory burden affecting mental clarity, energy regulation, circulation efficiency, and cognitive performance.

In Traditional Chinese Medicine (TCM), “Dampness” is associated with impaired fluid transformation and accumulation.

Modern parallels may include:

- metabolic inefficiency
- sedentary lifestyle burden
- poor sleep recovery
- chronic low-grade inflammation
- digestive dysfunction
- brain fog and fatigue patterns

Common Correlations

Higher Dampness scores may be associated with:

- reduced mental clarity
- sluggish thinking
- daytime fatigue
- poor concentration
- post-meal drowsiness
- abdominal bloating
- weight gain tendency
- poor sleep quality
- reduced exercise tolerance

Possible Biomedical Associations

(Not diagnostic)

- impaired glucose regulation
 - insulin resistance tendency
 - visceral adiposity
 - inflammatory burden
 - poor sleep hygiene
 - autonomic dysregulation
-

Dampness Index Scoring Guide

1–3 | Optimal Functional State

- good mental clarity
- efficient energy regulation
- healthy recovery patterns
- minimal signs of metabolic stagnation

4–6 | Mild Functional Imbalance

- occasional fatigue
- intermittent brain fog
- stress-related digestive symptoms
- inconsistent recovery

7–8 | Moderate Functional Burden

- persistent heaviness or sluggishness
- reduced cognitive sharpness
- poor metabolic resilience
- increased lifestyle-related risk patterns

9–10 | Significant Functional Dysregulation

- marked fatigue and cognitive dullness
 - chronic inflammatory/metabolic strain
 - reduced adaptive capacity
 - requires active intervention and monitoring
-

Dampness Recommendations

Evidence-Aligned Lifestyle Interventions

Nutrition

Focus:

- lower ultra-processed food intake
- reduce excessive refined sugars
- improve protein and fibre intake
- stabilize post-prandial glucose variability

Suggested:

- warm balanced meals
- adequate hydration
- reduce late-night eating
- moderate alcohol intake

Physical Activity

Recommended:

- resistance training
- post-meal walking
- aerobic conditioning
- mobility work

Target:

- ≥150 minutes weekly moderate activity

Sleep & Recovery

Aim:

- regular sleep timing
- improve sleep efficiency
- reduce nighttime overstimulation

TCM-Based Support

May include:

- acupuncture
 - body constitution regulation
 - herbal therapy
 - moxibustion
 - digestive-focused lifestyle strategies
-

2. Blood Stasis Index (1–10)

Clinical Interpretation

The Blood Stasis Index reflects potential impairment in circulation efficiency, recovery dynamics, and neurovascular resilience.

In TCM, Blood Stasis describes reduced or disrupted circulation and tissue nourishment. Modern parallels may include:

- microcirculatory inefficiency
- chronic tension patterns
- reduced vascular flexibility
- prolonged stress physiology
- impaired recovery

For brain health, efficient circulation is important for:

- oxygen delivery
 - nutrient transport
 - neural recovery
 - cognitive performance
-

Common Correlations

Higher Blood Stasis scores may correlate with:

- headaches
- neck and shoulder tension
- poor sleep quality
- reduced mental sharpness
- mood irritability
- cold extremities
- fixed body pain
- stress-related tension patterns

Possible Biomedical Associations

(Not diagnostic)

- sedentary behaviour
- chronic stress load
- vascular risk accumulation
- reduced physical conditioning
- impaired recovery physiology

Blood Stasis Index Scoring Guide

1–3 | Healthy Circulatory Function

- efficient recovery
- healthy circulation patterns
- stable cognitive endurance

4–6 | Mild Circulatory Strain

- occasional tension
- stress-related headaches
- intermittent sleep disruption

7–8 | Moderate Functional Restriction

- persistent muscular tension
- cognitive fatigue
- reduced recovery efficiency
- increased neurovascular strain

9–10 | Significant Functional Burden

- chronic tension and fatigue patterns
 - impaired recovery capacity
 - elevated lifestyle-related vascular risk profile
-

Blood Stasis Recommendations

Circulation & Brain Health Strategies

Movement Prescription

Recommended:

- regular movement breaks
- posture correction
- aerobic exercise
- mobility and stretching work

Target:

- reduce prolonged sitting duration

Stress Regulation

Recommended:

- breathing exercises
- mindfulness practices
- restorative sleep strategies
- parasympathetic activation routines

Brain Health Support

Encourage:

- cognitive engagement
- social interaction
- adequate hydration
- cardiovascular conditioning

TCM-Based Support

May include:

- acupuncture
- tuina/manual therapy
- circulation-focused herbal strategies
- meridian therapy

Combined Risk Interpretation Matrix

Dampness	Blood Stasis	Functional Interpretation
Low	Low	Good cognitive resilience and recovery
High Dampness	Low Stasis	Metabolic fatigue dominant pattern

Low Dampness	High Stasis	Stress-circulatory dominant pattern
High	High	Combined metabolic and circulatory burden affecting cognitive performance

Suggested Clinical Disclaimer

This report is intended for wellness screening and educational purposes only.
It does not diagnose medical disease or replace professional medical evaluation.
Findings should be interpreted together with clinical consultation, lifestyle assessment, and where appropriate, biomedical evaluation.

Why These Indices Matter

Emerging research suggests that long-term brain health is influenced not only by genetics, but also by:

- metabolic health
- sleep quality
- vascular circulation
- chronic inflammation
- stress regulation
- physical activity
- recovery capacity

This integrated framework combines Traditional Chinese Medicine pattern recognition with modern lifestyle and functional health principles to support early awareness and preventive care.

Potential CTA:

1. TCM consultation session
2. Supplements
3. Health screening package with a multi-disciplinary team assessment
4. TCM services after consultation - acupuncture , moxibustion
